

Why Choose PLANK from United Tile

All Wood Product. Plank products are 100% wood (no HDF) to ensure their dimensional stability. Engineered wood products are suitable for at, above, and below grade installations. See samples for specific details.

Hand scraped products. Unlike machine scraped products which can have repetitive looking boards, the hand scraping done on Plank ensures the boards are unique. In this process, the planks are wire brushed using copper brushes. This alternative to steel brushes, commonly used in the industry, enhances the grain without damaging the wood. It also makes each Plank product more natural looking.

Veneers. Plank products incorporate several veneer creation techniques to enhance the value and appearance of each series. Peeled veneers are used to produce Hand Crafted Birch and Random Width Birch. This gives both of these collections high value combined with beautiful appearance. The Hickory and Maple Heritage Collection use a slicing process to create their veneers. This gives these products a solid wood appearance including knots and cracks. Classic French Oak is produced using sawn veneers. In addition, a double smoking and aging process achieves deeper richer colors. This gives the Classic French Oak an enhanced natural wood grain appearance which closely replicates a natural oil finished product.

Classic French Oak - Blanchie

Classic French Oak - Charbon Noir

Matching Trims. All the trims are color and species coordinated to complement the finished job.

Classic French Oak. This product is hand scraped and copper wire brushed for a natural look. All boards are from the small area in France and Belgium that produces a wood with high tannin levels. These boards produce a unique look after going through the double smoke process. Each board is hand scraped. Any area that would compromise the look or durability of the wood is cleaned by hand and epoxy filled with a color that accentuates the board color. High penetration finishes are combined with high-durability aluminum oxide and Valspar to give it a natural oil look. This is a truly unique product in its category.

Board benefits. Our Hand Crafted Birch has 50% full length boards in each carton. Our random width products have equal S/F of each width in each carton. Our Classic French Oak has 85% full length boards in each carton.

Availability. All products and trims are stocked in the NW.
